

## Service Details

**String Change:** Fingerboard is cleaned and conditioned, new strings are installed. This service is available while you wait.

**Fine-tune New Guitar/Bass:** Most new guitars and basses are shipped out by the manufacturer with less than perfect fret jobs, not to mention less than perfect setups. For a nominal cost, corrections and adjustments can be made to fine-tune your new guitar to improve playability. The result is a smoother, easier playing guitar in every register of the fingerboard.

**Setup 6 and 7 Point:** Average of one hour is spent on every setup. Evaluating the entire guitar, the following adjustments are performed: 1-Adjust neck relief (truss rod), 2-Adjust nut action (dial indicator used to measure action over first fret) 3-String height (12th fret action), 4-Match saddle radius to the fingerboard, 5-Pickup heights, 6-Intonation, 7-Match pickup polepieces to string radius (where applicable). The guitar and new strings are then given 24 hours to settle into these adjustments, rechecked and fine-tuned.

**Pro Setup:** Includes the basic setup with the addition of cleaning all volume and tone pots, general cleaning of the guitar body and fingerboard, frets polished, and fingerboard conditioned.

**Fret Level, Crown and Polish:** Precision tools are used to evaluate the guitar neck and existing frets. The "Guitar Stretcher" is used to simulate normal string tension. The frets are precision leveled, then individually examined for accuracy. Finally the frets are perfectly crowned, dressed and polished to a mirror shine for clean, smooth tone and feel. A setup is included and thanks to the "Guitar Stretcher" the guitar plays clean with practically no neck relief!

**Guitar Refret:** Frets are available from thin to super jumbo depending on playing style and desired size. Extra care is given especially where vintage instruments are concerned. Precision tools are used to evaluate the entire fingerboard and neck. If a problem neck is discovered with humps or twisting, corrections are made prior to installing new frets. The "Guitar Stretcher" is then used to simulate string tension, returning the neck into its normal playing position. Frets are pressed into their slots which is much more consistent than hammering them in. The frets are precision leveled, perfectly crowned, mirror polished and finished off with a setup.

**Floyd Rose Installation:** Front and rear cavities are routed, mounting posts drilled and installed to accept the tremolo, the locking nut is mounted. The installation includes a setup.

**Headstock Repair:** Acoustic and Electric broken headstocks.

**Fingerboard Radius Modification:** Where possible, the radius of a fingerboard can be modified either flatter or rounder, within reason, to suit the needs and comfort desired by the customer.

**Compound Radius fingerboard:** The fingerboard is made conical (cone shaped) as opposed to the standard straight radius of a cylindrical fingerboard. A rounder radius in the lower register for comfortable chord playing and a gradual transition to a much flatter radius at the upper register for soloing. The change in radius is practically unnoticeable and best of all it allows for the lowest possible action and extreme note bending. The best of both worlds... vintage and modern.

**Neck Profile Modification:** Modify the shape of an existing neck to custom fit your hand.

**Weight Relieving:** The weight of an instrument is reduced by removing wood from the body and still maintaining balance.

**EARVANA Compensated Tuning Systems:** For those of us that are driven to insanity by the slightest variations of our guitars' intonation, there is... EARVANA!

**Pickup Replacement:** Looking for that unique sound? One of the simplest and most dynamic changes you can make is with a new pickup. With multiple guitar and bass pickup manufacturers today the choices are endless. Do your research, find out what brand some of your favorite players are using and make the switch.

**Electronics & Wiring:** Replacement and upgrade of electrical components (Volume and tone pots, switches, pickup selectors, jacks, etc) and other wiring needs available.
